
Table of Contents

Preface.....	xiii
1. What Is Google BigQuery?.....	1
Data Processing Architectures	1
Relational Database Management System	2
MapReduce Framework	3
BigQuery: A Serverless, Distributed SQL Engine	5
Working with BigQuery	7
Deriving Insights Across Datasets	7
ETL, EL, and ELT	8
Powerful Analytics	10
Simplicity of Management	12
How BigQuery Came About	12
What Makes BigQuery Possible?	15
Separation of Compute and Storage	15
Storage and Networking Infrastructure	16
Managed Storage	18
Integration with Google Cloud Platform	19
Security and Compliance	20
Summary	21
2. Query Essentials.....	23
Simple Queries	24
Retrieving Rows by Using SELECT	25
Aliasing Column Names with AS	27
Filtering with WHERE	28
SELECT *, EXCEPT, REPLACE	29

Subqueries with WITH	30
Sorting with ORDER BY	31
Aggregates	31
Computing Aggregates by Using GROUP BY	31
Counting Records by Using COUNT	32
Filtering Grouped Items by Using HAVING	33
Finding Unique Values by Using DISTINCT	33
A Brief Primer on Arrays and Structs	35
Creating Arrays by Using ARRAY_AGG	36
Array of STRUCT	39
TUPLE	39
Working with Arrays	40
UNNEST an Array	41
Joining Tables	42
The JOIN Explained	42
INNER JOIN	45
CROSS JOIN	46
OUTER JOIN	47
Saving and Sharing	48
Query History and Caching	49
Saved Queries	50
Views Versus Shared Queries	51
Summary	51
3. Data Types, Functions, and Operators.....	53
Numeric Types and Functions	54
Mathematical Functions	55
Standard-Compliant Floating-Point Division	55
SAFE Functions	56
Comparisons	56
Precise Decimal Calculations with NUMERIC	57
Working with BOOL	59
Logical Operations	59
Conditional Expressions	60
Cleaner NULL-Handling with COALESCE	61
Casting and Coercion	62
Using COUNTIF to Avoid Casting Booleans	64
String Functions	65
Internationalization	66
Printing and Parsing	67
String Manipulation Functions	68

Transformation Functions	68
Regular Expressions	69
Summary of String Functions	70
Working with TIMESTAMP	71
Parsing and Formatting Timestamps	71
Extracting Calendar Parts	73
Arithmetic with Timestamps	74
Date, Time, and DateTime	74
Working with GIS Functions	75
Summary	76
4. Loading Data into BigQuery.....	79
The Basics	79
Loading from a Local Source	80
Specifying a Schema	87
Copying into a New Table	90
Data Management (DDL and DML)	90
Loading Data Efficiently	92
Federated Queries and External Data Sources	94
How to Use Federated Queries	95
When to Use Federated Queries and External Data Sources	98
Interactive Exploration and Querying of Data in Google Sheets	105
SQL Queries on Data in Cloud Bigtable	114
Transfers and Exports	119
Data Transfer Service	119
Exporting Stackdriver Logs	125
Using Cloud Dataflow to Read/Write from BigQuery	127
Moving On-Premises Data	131
Data Migration Methods	132
Summary	134
5. Developing with BigQuery.....	135
Developing Programmatically	135
Accessing BigQuery via the REST API	135
Google Cloud Client Library	142
Accessing BigQuery from Data Science Tools	159
Notebooks on Google Cloud Platform	159
Working with BigQuery, pandas, and Jupyter	164
Working with BigQuery from R	169
Cloud Dataflow	170
JDBC/ODBC drivers	173

Incorporating BigQuery Data into Google Slides (in G Suite)	174
Bash Scripting with BigQuery	176
Creating Datasets and Tables	177
Executing Queries	179
BigQuery Objects	181
Summary	182
6. Architecture of BigQuery.....	185
High-Level Architecture	185
Life of a Query Request	185
BigQuery Upgrades	190
Query Engine (Dremel)	190
Dremel Architecture	192
Query Execution	197
Storage	211
Storage Data	211
Metadata	217
Summary	226
7. Optimizing Performance and Cost.....	229
Principles of Performance	229
Key Drivers of Performance	230
Controlling Cost	230
Measuring and Troubleshooting	232
Measuring Query Speed Using REST API	233
Measuring Query Speed Using BigQuery Workload Tester	234
Troubleshooting Workloads Using Stackdriver	236
Reading Query Plan Information	238
Increasing Query Speed	244
Minimizing I/O	245
Caching the Results of Previous Queries	250
Performing Efficient Joins	253
Avoiding Overwhelming a Worker	262
Using Approximate Aggregation Functions	265
Optimizing How Data Is Stored and Accessed	268
Minimizing Network Overhead	268
Choosing an Efficient Storage Format	272
Partitioning Tables to Reduce Scan Size	281
Clustering Tables Based on High-Cardinality Keys	284
Time-Insensitive Use Cases	288
Batch Queries	288

File Loads	289
Summary	290
Checklist	290
8. Advanced Queries.....	293
Reusable Queries	293
Parameterized Queries	294
SQL User-Defined Functions	299
Reusing Parts of Queries	303
Advanced SQL	307
Working with Arrays	308
Window Functions	316
Table Metadata	322
Data Definition Language and Data Manipulation Language	325
Beyond SQL	330
JavaScript UDFs	330
Scripting	332
Advanced Functions	339
BigQuery Geographic Information Systems	339
Useful Statistical Functions	346
Hash Algorithms	348
Summary	352
9. Machine Learning in BigQuery.....	353
What Is Machine Learning?	353
Formulating a Machine Learning Problem	354
Types of Machine Learning Problems	356
Building a Regression Model	359
Choose the Label	359
Exploring the Dataset to Find Features	360
Creating a Training Dataset	364
Training and Evaluating the Model	365
Predicting with the Model	367
Examining Model Weights	369
More-Complex Regression Models	371
Building a Classification Model	376
Training	377
Evaluation	378
Prediction	379
Choosing the Threshold	380
Customizing BigQuery ML	381

Controlling Data Split	382
Balancing Classes	383
Regularization	384
k-Means Clustering	385
What's Being Clustered?	385
Clustering Bicycle Stations	386
Carrying Out Clustering	387
Understanding the Clusters	388
Data-Driven Decisions	390
Recommender Systems	390
The MovieLens Dataset	391
Matrix Factorization	392
Making Recommendations	394
Incorporating User and Movie Information	396
Custom Machine Learning Models on GCP	403
Hyperparameter Tuning	403
AutoML	408
Support for TensorFlow	409
Summary	413
10. Administering and Securing BigQuery.....	415
Infrastructure Security	415
Identity and Access Management	417
Identity	417
Role	418
Resource	421
Administering BigQuery	421
Job Management	421
Authorizing Users	422
Restoring Deleted Records and Tables	422
Continuous Integration/Continuous Deployment	423
Cost/Billing Exports	425
Dashboards, Monitoring, and Audit Logging	428
Availability, Disaster Recovery, and Encryption	429
Zones, Regions, and Multiregions	430
BigQuery and Failure Handling	430
Durability, Backups, and Disaster Recovery	433
Privacy and Encryption	434
Regulatory Compliance	435
Data Locality	435
Restricting Access to Subsets of Data	437

Removing All Transactions Related to a Single Individual	441
Data Loss Prevention	444
CMEK	446
Data Exfiltration Protection	447
Summary	448
Index.....	449
